Completed with 43.16% in 2020

### MALCO VIDHALAYA MATRICULATION HIGHER SECONDARY SCHOOL, SSLC

Completed with 63.6% in 2018

## PROJECTS

### ENCRYPTED HONEY PASSWORD AUTHENTICATION FOR ONLINE BANKING SYSTEM-Built using pyCharm MySQL server, and python

The proposed system is based on the domain cyber security where the security framework is designed to fortify the authentication and password protection mechanism with online banking application. It introduces a multilayered approach to address the escalating challenges of cyber security. The password storage mechanism incorporates honey words, creating deceptive decoy passwords alongside real ones. The honey passwords are safeguarded through AES encryption, a robust algorithm providing a formidable defense against unauthorized access.
